Re: 147-12539
First Administrative Amendment to
S 147-11611-00053

Dear Chad Johnson:

On December 29, 1999, California Pacific Corporation was issued a Source Specific Operating Agreement (SSOA) for a stationary woodworking operation based on an application received from the source on November 29, 1999. In their application, the source requested insight on the permit, questioning the requirements for the amount of formaldehyde in a glue used in the manufacture of chip boards. The glue operation was not covered in the Source Specific Operating Agreement (SSOA). Because the source does not exceed the VOC limits for surface coating with the glue operation, the Source Specific Operation Agreement (SSOA) issued on December 29, 1999 is hereby amended as follows:

Section A: Surface Coating Operation: [326 IAC 2-9-2.5]

1. The total amount of volatile organic compounds (VOC) and hazardous air pollutants (HAP), as supplied, delivered to the surface coating operation shall not exceed the following:
 - (a) the total amount of VOC shall not exceed two (2) tons per month,
 - (b) the total amount of any single HAP shall not exceed eight hundred thirty-three (833) pounds per month, and
 - (c) the total amount of any combination of HAP shall not exceed one (1) ton per month.
2. The source shall keep the following records of the surface coating operation:
 - (a) the number of gallons of each solvent containing material used,
 - (b) the VOC and HAP content (pounds per gallon, as supplied) of each solvent containing material used,
 - (c) material safety data sheets (MSDS) for each solvent containing material used,
 - (d) a monthly summation of VOC and HAP usage, and
 - (e) purchase orders and invoices for each solvent containing material used.

These records shall be kept for a minimum period of five (5) years, and shall be made available upon request of the Office of Air Management (OAM).

3. Particulate matter emissions shall be controlled by a dry filter system or an equivalent control device. The source shall operate the particulate control device at all times the surface coating operation is in operation in accordance with the manufacturer's specifications. A source shall be considered in compliance with this requirement provided the overspray is not visibly detectable at the exhaust or accumulated on the rooftops or on the ground.
4. Include with the annual notice required in Condition 1 of the General Requirements Section, an inventory listing of the monthly volatile organic compound (VOC) and hazardous air pollutant (HAP) totals, and the total VOC and HAP emissions for the previous twelve (12) months.

All other conditions of the Source Specific Operating Agreement shall remain unchanged and in effect. Please attach a copy of this amendment and the following revised agreement page to the front of the original agreement.

This decision is subject to the Indiana Administrative Orders and Procedures Act - IC 4-21.5-3-5. If you have any questions on this matter, please contact Sherry Harris, at (800) 451-6027, press 0 and ask for Sherry Harris or extension 4-1207, or dial (317) 234-1207.

Sincerely,

Paul Dubenetzky, Chief
Permit Branch
Office of Air Management
